1 A1 Additional Figures

Figure A1: Worker phenology for *B. mixtus* and *B. impatiens* in 2022 and 2023. Bars are coloured by landscape; values are the total number of captures at a landscape on a given day, divided by the total number of (5 minute) sampling events conducted on that day. All available *B. mixtus* pollen loads were sequenced; *B. impatiens* pollen loads were sequenced for a subset of individuals captured between 18 July-16 August (i.e., day of year 199-228).
